ELL students make up over 10% of the student population in these seven states:

- Students with limited language proficiency have a lower average graduation rate than their peers.
- Teachers say they lack high-quality instructional materials for addressing students’ language and academic needs.
- And only one-third of district-level educators think their schools are prepared to teach ELL students.
- As a result, ELL students continue to struggle, falling behind their peers.

In 2015, the achievement gap between non-ELL and ELL students for reading scores was:

- 76.5% for English Learners
- 76.5% for All Students
- 2.2% for English Learners
- 2.2% for All Students
- 2.2% for English Learners
- 2.2% for All Students
- 76.5% for English Learners
- 2.2% for All Students
