

This course begins an expanded, two-year Algebra I sequence designed for students who are not yet prepared for the academic challenges of the traditional one-year Algebra I curriculum.

Focusing on review of pre-algebra skills and introductory algebra content, the first year curriculum allows students to deepen their understanding of real numbers in their various forms and then extend their knowledge to linear equations in one and two variables.

The two course sequence features ample opportunity for students to hone their computational skills by working through practice problem sets before moving on to formal assessment.

This course is built to state standards.
