

United States History and Geography begins with the establishment of European colonies in North America and then traces the nation's history from post-Civil War to the present. Students examine the beliefs and philosophies that informed the American Revolution and the subsequent formation of the government and political system, then evaluate the attempts to bind the nation together during Reconstruction while simultaneously exploring the growth of an industrial economy. Moving into the 20th and 21st centuries, students probe the economic and diplomatic interactions between the United States and other world players while investigating how the world wars, the Cold War, and the "information revolution" affected the lives of ordinary Americans. Woven through this chronological sequence is a strong focus on the changing conditions of women, African Americans, and other minority groups.

The course emphasizes the development of historical analysis skills such as comparing and contrasting, differentiating between facts and interpretations, considering multiple perspectives, and analyzing cause-and-effect relationships. These skills are applied to text interpretation and in written assignments that guide learners step-by-step through problem-solving activities.

This course is built to California's standards for United States History and Geography.
