

California Middle School Grade 8 Science Tutorials offer targeted instruction, practice, and review designed to help students develop scientific literacy, deepen conceptual understanding, and apply scientific practices. Students explore concepts such as waves and electromagnetic radiation, energy and forces on Earth and in space, genetics and natural selection, engineering design, and the impact of humans on Earth's resources.

Students engage with the content in an interactive, feedback-rich environment as they progress through standards-aligned modules. By continually honing their ability to apply knowledge in real-world scenarios, students build the depth of knowledge and higher-order skills required to demonstrate their mastery when put to the test.

In each module, the Learn It and Try It make complex ideas accessible to students as they explore the nature of science through focused content, interactive mini investigations, multi-modal representations, and personalized feedback. The Review It offers a high-impact summary of key concepts and relates those concepts to students' lives. The Test It assesses students' mastery of the module's concepts, providing granular performance data to students and teachers after each attempt. To help students focus on the content most relevant to them, unit-level pretests and posttests can quickly identify where students are strong and where they're still learning.

These Tutorials are built to the Next Generation Science Standards for middle school science.

1. NATURE OF SCIENCE

- **WHAT IS SCIENCE?**
- **TYPES OF INVESTIGATIONS**
- **USING MODELS**

2. MEASUREMENT AND DATA

- **TOOLS AND MEASUREMENT**
- **DISPLAYING AND INTERPRETING DATA**

3. FORCE AND MOTION

- **DESCRIBING FORCES**
 - **MS-PS2-5** *Conduct an investigation and evaluate the experimental design to provide evidence that fields exist between objects exerting forces on each other even though the objects are not in contact.*
- **DESCRIBING MOTION**
 - **MS-PS2-2** *Plan an investigation to provide evidence that the change in an object's motion depends on the sum of the forces on the object and the mass of the object.*
- **EFFECTS OF FORCES**
 - **MS-PS2-2** *Plan an investigation to provide evidence that the change in an object's motion depends on the sum of the forces on the object and the mass of the object.*

4. NONCONTACT FORCES

- **ELECTROMAGNETIC FORCES**
 - **MS-PS2-3** *Ask questions about data to determine the factors that affect the strength of electric and magnetic forces.*

- **MS-PS2-5** Conduct an investigation and evaluate the experimental design to provide evidence that fields exist between objects exerting forces on each other even though the objects are not in contact.

- **GRAVITATIONAL FORCE**

- **MS-PS2-4** Construct and present arguments using evidence to support the claim that gravitational interactions are attractive and depend on the masses of interacting objects.

5. ENERGY

- **DESCRIBING ENERGY**

- **MS-PS3-1** Construct and interpret graphical displays of data to describe the relationships of kinetic energy to the mass of an object and to the speed of an object.

- **ENERGY TRANSFER AND TRANSFORMATION**

- **MS-PS3-2** Develop a model to describe that when the arrangement of objects interacting at a distance changes, different amounts of potential energy are stored in the system.

6. WAVES

- **MECHANICAL WAVES**

- **MS-PS4-1** Use mathematical representations to describe a simple model for waves that includes how the amplitude of a wave is related to the energy in a wave.

- **ELECTROMAGNETIC WAVES**

- **MS-PS4-1** Use mathematical representations to describe a simple model for waves that includes how the amplitude of a wave is related to the energy in a wave.

7. APPLICATIONS OF WAVES

- **INTERACTIONS OF WAVES WITH MATTER**

- **MS-PS4-2** Develop and use a model to describe that waves are reflected, absorbed, or transmitted through various materials.

- **WAVES AND TECHNOLOGY**

- **MS-PS4-3** Integrate qualitative scientific and technical information to support the claim that digitized signals are a more reliable way to encode and transmit information than analog signals.

8. THE SOLAR SYSTEM

- **SUN-EARTH-MOON SYSTEM**

- **MS-ESS1-1** Develop and use a model of the Earth-sun-moon system to describe the cyclic patterns of lunar phases, eclipses of the sun and moon, and seasons.

- **OUR SOLAR SYSTEM**

- **MS-ESS1-2** Develop and use a model to describe the role of gravity in the motions within galaxies and the solar system.
- **MS-ESS1-3** Analyze and interpret data to determine scale properties of objects in the solar system.

9. EXPLORING THE UNIVERSE

- **THE UNIVERSE**

- **MS-ESS1-2** Develop and use a model to describe the role of gravity in the motions within galaxies and the solar system.

- **SPACE EXPLORATION**

10. LIVING THINGS

- **CLASSIFICATION OF LIVING THINGS**

- **MS-LS4-2** Apply scientific ideas to construct an explanation for the anatomical similarities and differences among modern organisms and between modern and fossil organisms to infer evolutionary relationships.
- **MS-LS4-3** Analyze displays of pictorial data to compare patterns of similarities in the embryological development across multiple species to identify relationships not evident in the fully formed anatomy.

- **CELL GROWTH AND REPRODUCTION**

11. GENETICS

- **INHERITANCE**

- **GENES AND DNA**

- **MS-LS3-1** Develop and use a model to describe why structural changes to genes (mutations) located on chromosomes may affect proteins and may result in harmful, beneficial, or neutral effects to the structure and function of the organism.

- **BIOTECHNOLOGY**

- **MS-LS4-5** Gather and synthesize information about the technologies that have changed the way humans influence the inheritance of desired traits in organisms.

12. EVOLUTION

- **GEOLOGIC TIME**

- **MS-ESS1-4** Construct a scientific explanation based on evidence from rock strata for how the geologic time scale is used to organize Earth's 4.6-billion-year-old history.

- **THEORY OF EVOLUTION**

- **MS-LS4-1** Analyze and interpret data for patterns in the fossil record that document the existence, diversity, extinction, and change of life forms throughout the history of life on Earth under the assumption that natural laws operate today as in the past.
- **MS-LS4-2** Apply scientific ideas to construct an explanation for the anatomical similarities and differences among modern organisms and between modern and fossil organisms to infer evolutionary relationships.

- **NATURAL SELECTION**

- **MS-LS4-4** Construct an explanation based on evidence that describes how genetic variations of traits in a population increase some individuals' probability of surviving and reproducing in a specific environment.
- **MS-LS4-6** Use mathematical representations to support explanations of how natural selection may lead to increases and decreases of specific traits in populations over time.

13. HUMANS AND EARTH'S RESOURCES

- **NATURAL RESOURCES**

- **IMPACTS OF HUMANS**

- **MS-ESS3-4** Construct an argument supported by evidence for how increases in human population and per-capita consumption of natural resources impact Earth's systems.
